

DigiLocker Training Notes

Practical beginner guide for accessing, fetching, storing, sharing and verifying digital documents.

Course: DigiLocker Training

Source basis: Official DigiLocker and National Academic Depository documentation.

1. Introduction to DigiLocker

DigiLocker is a Government of India digital document platform that provides citizens access to authentic digital documents and certificates. It supports storage, access, sharing and verification of digital records.

DigiLocker is part of the Digital India ecosystem and is maintained by the National e-Governance Division (NeGD), Digital India Corporation and the Ministry of Electronics & Information Technology (MeitY).

2. Main Sections

- **Home:** Main dashboard for navigating the account.
- **Issued Documents:** Documents electronically issued by integrated government departments or agencies.
- **Uploaded Documents / DigiLocker Drive:** Files uploaded directly by the user.
- **Activity:** Records actions such as upload, download and share.
- **Browse Documents:** Lists participating issuers and available document categories.

3. Account Creation and Login

- Open the official DigiLocker website or mobile application.
- Select Login or Sign Up.
- Enter the registered mobile number, or use the available Aadhaar/VID option.
- Complete the requested OTP or authentication step.
- After successful authentication, the dashboard is displayed.

Always use the official DigiLocker domain when entering sensitive information.

4. Issued vs Uploaded Documents

Issued documents are electronic records provided by integrated issuers and linked to the issuer's digital source. **Uploaded documents** are files placed in DigiLocker by the user. The two types should not be treated as identical.

5. Fetching an Issued Document

- Open **Browse Documents**.
- Select the appropriate category.
- Choose the issuing organization.
- Select the required document type.
- Enter the details requested by the issuer, such as roll number, registration number or year.
- Provide consent when requested and select **Get Document**.
- After successful retrieval, check **Issued Documents**.

6. Academic Documents

- Open **Browse Documents** and choose **Education**.
- Find the institution and select the document type.
- Enter the required student/examination details.
- Provide consent and select **Get Document**.
- The retrieved academic award can then be accessed from **Issued Documents**.

7. Viewing, Downloading and Sharing

- Open the required document from Issued Documents.
- Review the document details.
- Use the available download/export option when a local copy is needed.
- Use Share when you need to provide the document or its access information to a requester.
- Check the recipient before sharing and share only when necessary.

8. Document Verification

Official DigiLocker documentation describes verification through mechanisms including issuer-linked information, QR codes and verification services for supported documents. When verification is required, use the method supplied by DigiLocker or the issuing authority instead of relying only on a screenshot.

9. Security and Safe Usage

- Use the official DigiLocker website/application.
- Never share OTPs, passwords or authentication codes.
- Check recipients before sharing documents.
- Avoid storing sensitive files unless there is a clear purpose.
- Log out on shared/public computers.
- Review account activity if unexpected actions appear.

10. Common Problems

- **Document not found:** Confirm the issuer, document type and requested details.
- **Login/OTP problem:** Check the registered mobile number and connection, then retry.
- **Academic document missing:** The institution may not have published the record through the DigiLocker/NAD ecosystem.
- **Verification concern:** Use the official QR or issuer verification mechanism.

11. Quick Revision

- DigiLocker provides access to digital documents and certificates.
- Issued Documents come from integrated issuers; uploaded documents are user-provided files.
- Browse Documents is used to discover issuers and fetch eligible documents.
- Retrieved records can appear in Issued Documents.
- Sharing should be done carefully and with consent.
- Official verification methods should be preferred.

12. Practice Questions

1. What is the difference between an issued document and an uploaded document?
2. Which section is used to discover participating issuers?
3. Where does a successfully fetched document normally appear?
4. What information should never be shared with another person during login?
5. Why should official verification methods be used?
