Educational Training Notes

Prepared from official government information. This is training material, not an official identity document or certificate.

1. Introduction to Aadhaar

Aadhaar is a unique identity system administered by UIDAI. It supports identity verification and digital services.

Key services include e-Aadhaar download, available updates, biometric lock or unlock, authentication history and offline e-KYC.

2. e-Aadhaar

e-Aadhaar is a password-protected electronic copy of Aadhaar digitally signed by UIDAI. UIDAI states that e-Aadhaar is equally valid as the physical copy for purposes where Aadhaar is accepted.

UIDAI describes downloading e-Aadhaar using an Aadhaar Number, Enrollment Number or VID, with OTP sent to the registered mobile number.

3. Downloading e-Aadhaar

1. Open official UIDAI/MyAadhaar service.
2. Choose e-Aadhaar download.
3. Enter the required identification details.
4. Complete OTP verification.
5. Download the PDF and open it with a PDF reader.

4. Masked Aadhaar and PDF Password

Masked Aadhaar shows only the last four digits of the Aadhaar number. UIDAI describes the e-Aadhaar PDF password as the first four letters of the name in capital letters followed by the year of birth.

5. Updating Aadhaar

UIDAI provides online and centre-based update routes depending on the service. For centre-based requests, an acknowledgement containing an Enrolment ID can be used to check status.

6. Security and Safe Usage

- Use only official UIDAI/MyAadhaar services.
- Never share OTPs, passwords or authentication codes.
- Avoid unknown websites asking for Aadhaar details.
- Use masked Aadhaar where a full number is not required.
- Check the recipient before sharing identity documents.

7. Quick Revision

e-Aadhaar = digitally signed electronic Aadhaar copy.

Masked Aadhaar = only the last four digits are visible.

UIDAI = Unique Identification Authority of India.
